

MAITREE MEHER

UC BERKELEY M.E.T. – DUAL DEGREE PROGRAM EECS/BUSINESS ADMINISTRATION

maitree.meher@berkeley.edu 510-229-2586 [linkedin.com/in/maitreemeher/](https://www.linkedin.com/in/maitreemeher/) Berkeley MET

ABOUT ME

Languages Python, C++, Rust, JavaScript, Java, SQL, RISC-V, Assembly, React, Swift, HTML/CSS, L^AT_EX
Skills Machine Learning, Quant Finance, Statistics, Graph Theory, Docker, Kubernetes, AWS
Libraries TensorFlow, PyTorch, SciPy, NumPy, Keras, Torchvision, Pandas
Interests Running, Table Tennis, Hiking, Mathematics

EDUCATION

University of California, Berkeley – GPA 3.8/4.0

Berkeley, CA

- One of 50 selected globally for competitive dual-degree M.E.T. program; < **0.8% acceptance rate**
- Electrical Engineering and Computer Science (**EECS**) and Business Admin in Haas School of Business
- Received **\$52,000** worth of scholarships from LinkedIn, NBC, and U.C. Berkeley
- Communities: Net Impact Berkeley (NIB), AI Entrepreneurs @ Berkeley, CS Mentors, CIB Quant
- **Jane Street Estimathon** Winning Team; **Kalshi** Predictions at Berkeley Winner

Air Force School, Pune, India

Pune, India

- **JEE All India Rank 1768** out of 1.2 million candidates; **Admitted to IIT Bombay, Delhi, Madras for Electrical Engineering/Computer Science**

WORK EXPERIENCE

Berkeley AI Research (BAIR), EMBER Centre

Machine Learning Research

Berkeley, CA (04/2026 - Present)

- Advised by Jonas Frey and Siming He in Profs. Jitendra Malik and Claire Tomlin's lab; trained vision-language navigation (VLN) models to find objects under a time budget, reaching **72.7%** of targets vs 44.8% baseline
- Won **Best Paper Award** as first author at the IROS 2026 Workshop on Intelligent Information Gathering; won an **NSF grant valued at \$150,000** in compute via ACCESS; extended version under review at **ICRA 2027**

Relling Systems

Machine Learning Research Intern

Berkeley, CA (10/2025 - 04/2026)

- Discovered and localized temporal blindness in robot foundation models (π 0-FAST, π 0.5) through a 255-episode evaluation framework and 36-layer embedding probe; findings drove the design of a plug-in temporal encoder
- LoRA fine-tuned π 0.5 and π 0-FAST on in-house robot demonstration data to adapt them to new tasks; shipped the episode collection and labeling tooling for the data generation platform, growing active users by **28.5%**

Squarepoint Capital

PhD level Quantitative Research Intern

London, UK (06/2025 - 08/2025)

- Deployed strategies replicating variance swaps under real-world volatility smiles; findings adopted for internal calibration review; **highest PnL** among the entire intern class of PhDs/Masters (received a return offer)

Engelhart Trading

PhD level Quantitative Research Intern

Houston, TX (06/2024 - 08/2024)

- Built a SABR Monte Carlo pricer (Milstein scheme, implied correlation per strike) for illiquid natural gas Calendar Spread Options, adopted by the desk to price and hedge unquoted spreads and track the Oct–Jan skew daily
- Built a tail-risk monitor for power price shocks, flagging 5th/95th percentile scenarios by peak and off-peak hours each morning; used by traders to position ahead of moves rather than react to them

Handle.com

Software Engineering Intern

San Francisco, CA (06/2024 - 08/2024)

- Built LLM-powered scrapers and APIs over Google Maps, DataTree and state license websites to verify property owners and contractors, raising search accuracy by **35%** and automating the lookups behind payment compliance

LinkedIn

Software Engineering Intern

San Francisco, CA (02/2024 - 05/2024)

- Built and shipped to production a Java tool on the Machine Learning team that automates integrations between OpenAPI clients and **7** third-party providers, using NLP to classify errors and speed up failure triage

ACTIVITIES AND PROJECTS

Fourth Down - Prediction Markets

- Developed and operated a live event-trading dashboard for college football markets, streaming odds, and play-by-play into a single interface with sub-second updates; used it to react to large in-game price swings within 300–400 ms, compounding a dedicated \$15k bankroll into **\$62k** over 8 weeks (**313% ROI**)
